

## Who is uptime software?

uptime software is the creator of up.time, software designed as a single tool for mid-enterprise IT departments to deeply monitor and manage their virtual and physical infrastructure and applications.

- Over 700 customers.
- Designed for Mid-Enterprises.
- A single tool to monitor the entire IT environment.
- Simple and affordable, with per-physical-server licensing, even in virtual environments.
- Easy to use, deployment in as little as 1-day.

## Deep Monitoring for the Mid-Enterprise

When it comes to monitoring and managing servers and applications, mid-enterprise companies have complex needs, and tight budgets. They require deep and broad monitoring that provides a one-stop view of the health of their IT environment, while providing deep dive capabilities and root-cause analysis from top to bottom.

### up.time Has You Covered:

- **Depth:** Deep metrics at the service, application, and system resource levels without the complexity of 'enterprise' tools.
- **Cost:** Easy to understand per-physical-server licensing with no tiers, management packs, or add-ons (even in virtual environments). Just count the number of physical servers. That's it.
- **Easy:** Fully deployable in less than 1-day.

## Is up.time a Good Fit for Your IT Needs?

Do you have an IT environment that includes...

- Infrastructure and applications requiring deep monitoring but need a tool that's easy-to-use, fast to deploy and priced for mid-enterprise budgets?
- Virtual and physical applications/ infrastructure and want to simplify management with a single tool?
- Services that could be delivered better using proactive outage avoidance and automated healing?

## WHAT PEOPLE ARE SAYING:

"up.time proves that it has what it takes, time and time again. up.time is, frankly, superb. Ridiculously easy to use, vast range of platforms supported, and addresses all the monitoring, reporting and alerting needs of the system manager. It really is the all-in-one systems management tool, especially with its attractive licensing."

*TechWorld*

"up.time provides a centralized view of physical and virtual servers, devices and applications. Tight integration with VMware helps increase virtual machine density, and makes it easier to fix and avoid outages in both virtual and physical environments."

*NetworkWorld*

"We were outgrowing our current tool and needed deep monitoring and reporting that could still fit within our budget. Now, up.time makes reporting a breeze and scaling a non-issue. up.time is powerful, low maintenance and very easy to use. We fully deployed in 1-day."

*University Health System*

## Simplify the Management of Virtual and Physical Environments with a Single Tool

How do you troubleshoot an application across multiple environments? How do you see through the virtual layers to the physical infrastructure for fast root-cause analysis? What about the Unix boxes that run critical services? Lastly, have you thought about how you might monitor Cloud in the future?

Relax, up.time has you covered:

- **Control Everything:** Monitor the virtual and physical environments from a single dashboard (Windows, VMware, Solaris, AIX, Linux, HP-UX, Novell, and public Cloud).

- **Solve Virtualization Challenges:** Reports for identifying virtualization candidates, for optimizing VM density, and for ensuring end-user performance.
- **Scale Up:** Easily monitor 1,000's of servers across one or many datacenters.

## Ensure Service Levels with Proactive Outage Avoidance and Automated Healing

Strategic mid-enterprise IT departments want to focus on proactive IT management, in order to provide better service to the business.

up.time helps you get proactive with:

- **Outage Avoidance:** Proactively identify problem infrastructure and applications to find issues before they happen.
- **Automate:** Set thresholds to automatically add or remove capacity as needed.
- **Optimize Capacity:** Graph capacity over time, and get alerted before potential capacity problems arise.
- **Service Level Management:** Map Business needs and services to the underlying IT infrastructure to ensure delivery. Automate management reports and graphs.

## WHAT PEOPLE ARE SAYING:

"By keeping track of service levels over time and analyzing historical service-level trends, up.time helps IT organizations use SLA monitoring and reporting tools to predict and prevent problems before they impact business users."

- Gartner

"It is fun to read a caution on the uptime software web site that says, 'up.time installs in minutes and works exactly as advertised.' It is even more refreshing to find that there is really something to back it up. What an impressive product this is."

- UnixReview.com

"Rolling out to 250 servers across VMware, Solaris, Linux, and Windows was a snap and we didn't have to pay for each virtual host, that's a huge cost savings."

**\$1B European Bank**  
(under NDA)

"up.time's outage avoidance and fast MTTR has already saved us over \$50,000. In fact, 30 minutes of downtime can result in thousands of dollars of lost revenue to us and our clients. That makes proactive IT critical to CU Direct's success, and that's why we chose up.time."
