

What's New in up.time

New: NetFlow

- **Easily Identify:** Top Applications, Conversations, Flows, Protocols, Domains, Countries, Subnets, etc. across dozens of routers and switches.
- **Easily Track:** repeat offenders history and create a Unique Index (UI) to manage traffic counts. Locate machines involved with DoS attacks or infected with viruses.
- **Historical Netflow Data:** Unlimited amounts of past NetFlow data, even raw flows, for as long as necessary.
- **Network Behavior Analysis:** Algorithms perform Network Behavior Analysis on flows across all routers / switches.

New: Agentless Windows Monitoring

- **Deep Monitoring Made Easy:** up.time's new agentless Windows technology provides deep monitoring previously only available with agents.
- **Auto Discovery:** up.time immediately discovers Windows systems in your environment, and makes monitoring them easy.
- **Easier Maintenance:** No more agent maintenance or updates needed. The historical WMI gateway has been replaced with agentless monitoring.
- **Expanded Exchange and SQL Monitoring**

Improved: SLA Monitoring and Reporting

- **Set up SLAs in 10 Minutes or Less:** Point, click, done.
- **Dry-Run Your SLAs:** Use up.time's historical data to dry-run potential SLAs, and see if you would have hit or missed an SLA before you agree to it.
- **Map Services and Business Units to Infrastructure:** up.time is one of the only products that maps at the infrastructure level, allowing you to monitor the SLA, and see all the applications and hardware in the delivery. Priceless for troubleshooting.

Did You Know, up.time can:

- **Solve Your Virtualization Challenges:** Reports for identifying virtualization candidates, for optimizing VM density, and for ensuring end-user performance.
- **Automatically Avoid Outages:** Proactively identify problem infrastructure and applications to find issues before they happen. Automatically add/remove capacity as needed.
- **Optimize Capacity:** Graph capacity over time, and get alerted before potential capacity problems arise.
- **Watch over Multiple Datacenters:** Whether it's DR across the street, or various offices around the globe, use up.time as a single dashboard for global IT health monitoring.

WHAT ARE PEOPLE SAYING ABOUT UP.TIME?

"up.time proves that it has what it takes, time and time again. up.time is, frankly, superb. Ridiculously easy to use, vast range of platforms supported, and addresses all the monitoring, reporting and alerting needs of the system manager. It really is the all-in-one systems management tool, especially with its attractive licensing."

TechWorld

"up.time provides a centralized view of physical and virtual servers, devices and applications. Tight integration with VMware helps increase virtual machine density, and makes it easier to fix and avoid outages in both virtual and physical environments."

NetworkWorld
