

UPTIME SOFTWARE MEDIA COVERAGE

DEEP & SCALABLE "SET IT AND FORGET IT" ENTERPRISE IT SYSTEMS MANAGEMENT SOFTWARE

It Just Works... without Breaking the Bank

Let's be honest. When it comes to enterprise IT systems management tools, most are as painful to use as the problems they try to solve. You need something that makes IT run smoother, and doesn't break the IT bank. And that's exactly why our customers love up.time... because it just works.

Analyst Coverage:

The 451 Group: This is a powerful product – one that we think will win some larger enterprise deals and strengthen its positioning as a Big Four alternative with extensive virtualization management capabilities. uptime software has quietly built up a customer base of more than 900 across verticals, geographies and market segments. With IT budgets constrained, lower-cost and full-featured offerings like up.time will have a chance to shine.

Gartner (Magic Quadrant Review): up.time ... combines fault and performance monitoring, enabling it to provide availability data to address immediate issues and issues of service degradation. It also has good capabilities for managing virtual server environments, including the ability to show, in one holistic view, how each virtual server is affected by the physical server (e.g. percentage use over a period of time).

IDC: up.time enables IT organizations to manage, measure, and monitor physical and virtual assets and infrastructure through a unified monitoring dashboard. It monitors and optimizes virtual server performance, availability, and capacity utilization across geographically diverse locations.

Industry News:

Network Computing: up.time offers better efficiency across all environments, including VMware, and provides a centralized view of the performance, availability and capacity of physical and virtual servers, devices and applications. [Click Here for Full Article](#)

CIO Magazine: Mount Sinai Hospital uses up.time to monitor its own service levels, verify the SLA data that its data-center management service provides, and to help with capacity planning and migration on virtualization projects with VMware-based servers, as well as a range of Unix servers and specialized applications. [Click Here for the Full Article](#)

ComputerWorld: uptime software offers tools that are designed to help data center staff keep an eye on server and application performance, spot emerging problems and capitalize on performance improvement opportunities. [Click Here for Full Article](#)

InformationWeek: In addition to deeply monitoring performance, availability and capacity on VMware, Windows and Linux, up.time can also see servers running Sun's Solaris 10, IBM's AIX, HP's HPUX, the former SGI's Irix and the former Compaq Unix, Tru 64, now owned by HP. up.time's per-server, rather than per-CPU, pricing model makes it a much less expensive approach to systems management than other virtualization vendors. Product Reviews:

xtraVirt: We see a lot of products and are frequently asked to comment about user experience. In this case we'd have to say up.time is one of the best user interfaces for a multi-faceted product we've seen. uptime software has put some real thought into providing a cohesive cross-platform suite of management and monitoring software. TechWorld: up.time is, frankly, superb. An excellent tool for monitoring just about any server platform you care to mention. Ridiculously easy to use, vast range of platforms supported, and addresses all the monitoring, reporting and alerting needs of the datacenter manager.

OpenBench Labs: Incredibly intuitive and easy-to-use enterprise software. No training or professional services required for deployment or maintenance. No baby-sitting or time consuming administration needed. [Click Here for the Full Review](#)

Product Awards:

2011 CODiE Finalist: For over 25 years the CODiE awards have been issued by the Software and Information Industry Association for *excellence in software development*.

TechWorld: Product of the Year award winner in 2009 and 2011.
