

REVIEWS ON UP.TIME

Powerful & Easy Enterprise IT Systems Management That Won't Break the Bank

It Just Works... without Breaking the Bank

Let's be honest. When it comes to IT systems management tools, most are as painful to use as the problems they try to solve. You need something that makes IT run smoother, and doesn't break the bank. And that's exactly why our customers love up.time... because it just works.

Analyst Reviews:

Gartner. up.time ... combines fault and performance monitoring, enabling it to provide availability data to address immediate issues and issues of service degradation. It also has good capabilities for managing virtual server environments, including the ability to show, in one holistic view, how each virtual server is affected by the physical server (e.g. percentage use over a period of time).

 This is a powerful product – one that we think will win some larger enterprise deals and strengthen its positioning as a Big Four alternative with extensive virtualization management capabilities. uptime software has quietly built up a customer base of more than 900 across verticals, geographies and market segments. With IT budgets constrained, lower-cost and full-featured offerings like up.time will have a chance to shine.

 up.time enables IT organizations to manage, measure, and monitor physical and virtual assets and infrastructure through a unified monitoring dashboard. It monitors and optimizes virtual server performance, availability, and capacity utilization across geographically diverse locations.

Media Reviews:

 up.time offers better efficiency across all environments, including VMware, and provides a centralized view of the performance, availability and capacity of physical and virtual servers, devices and applications.

 CIO Magazine: Mount Sinai uses uptime to monitor its own service levels, verify the SLA data that its data-center management service provides, and to help with capacity planning and migration on a virtualization projects with VMware-based servers, as well as a range of Unix servers and specialized applications.

COMPUTERWORLD uptime software offers tools that are designed to help data center staff keep an eye on server performance, spot emerging problems and capitalize on performance improvement opportunities.

InformationWeek In addition to deeply monitoring performance, availability and capacity on VMware, Windows and Linux on x86 servers, up.time can also see servers running Sun's Solaris 10, IBM's AIX, HP's HP-UX, the former SGI's Irix and the former Compaq Unix, Tru 64, now owned by HP. up.time's per-element, rather than per-CPU, pricing makes it a much less expensive approach to systems management than other virtualization vendors.

Product Reviews:

xtravirt We see a lot of products and are frequently asked to comment about user experience. In this case we'd have to say this is one of the best user interfaces for a multi-faceted product we've seen. uptime software has put some real thought into providing a cohesive cross-platform suite of management and monitoring software.

 An excellent tool for monitoring just about any server platform you care to mention. up.time is, frankly, superb. Ridiculously easy to use, vast range of platforms supported, and addresses all the monitoring, reporting and alerting needs of the system manager.

 Incredibly intuitive and easy-to-use. No training or professional services required for deployment or maintenance. No baby-sitting or time consuming administration needed.

Customer Reviews:

"With up.time, we found all the monitoring and management functionality we needed for less than the cost of our annual maintenance of NetIQ." TTI Inc., a Berkshire Hathaway Company

"After easily deploying up.time to over 125 servers, we are seeing an immediate and significant cost savings in licensing, and especially in consulting fees. In fact, time spent on manual monitoring and planning processes by consultants and internal resources has dropped dramatically" – Six Telekurs, Financial Services

"We looked at a stack of solutions, including the larger tier vendors, but the timelines to deployment and costs were unreasonable. up.time stood out as a quick deployment and quick results software solution. I would absolutely recommend up.time, as they're not just a product, but a company that has become more of a partner with us. I couldn't be happier with it." - Toll Holdings Group, Logistics
