

MANAGE, MEASURE, AND MONITOR YOUR VMWARE INFRASTRUCTURE EFFICIENTLY TO DRIVE PERFORMANCE AND COST SAVINGS.

Reducing costs, improving efficiency, and managing complex IT environments is par for the course in today's enterprise. While Virtualization has helped enable associated initiatives, it has also created some hefty new challenges as well:

Do You Have Trouble Managing VM Sprawl?

- Do you know which servers should be virtualized?
- Do you know if sprawl is getting better or worse?

Are You Still Reacting Most of the Time?

- Can you isolate which systems are triggering the majority of incidents and downtime?
- How are you alerted when a problem occurs?
- How quickly can you pinpoint problems?

Are You Wasting Resources, Time, and Budget?

- Are you efficiently using the VM Infrastructure?
- Are you optimizing workloads for maximum density?
- How do you identify VM contention issues?
- How are you avoiding incidents from recurring?

Do you Need to Plan and Manage Your VMware Growth?

- How do you plan for consolidation?
- How do you minimize risk while growing virtual infrastructure?
- Do you currently have visibility into both virtual and physical infrastructure with your current solution?

up.time is systems management software that provides highly scalable management, measurement, and monitoring across platforms, applications, domains, and datacenters with role based dashboards. Intuitive performance and availability monitoring of physical and virtual environments is controlled through a single centralized console.

up.time provides the insight to more effectively manage distributed applications and global services levels, as well as maximize enterprise-wide IT resources.

The up.time Solution

Increase Efficiency: With up.time, one solution quickly identifies repeat outage offenders and VM contention issues, decreases the number of incidents, increases VM density, and tracks the status of VM sprawl.

Improve Visibility and Manageability with One Dashboard: up.time provides visibility and manageability of your entire IT infrastructure (including applications) through role based dashboards. Minimize risk and downtime with one complete cross-platform solution.

Quickly Isolate Problems and Save Time: up.time alerts when problems occur, quickly pinpoints root-cause, and can automate actions to stop outages from reoccurring in the future. Triage performance issues rapidly and decrease Mean-Time-To-Repair (MTTR). Drill deep into advanced VMware metrics to optimize workloads for maximum density.

Automatically Avoid Incidents Before They Occur: up.time's deep integration with VMware's vCenter Orchestrator® makes automating actions to stop recurring and future outages easy, saving time and resources.

Enable Rapid Virtual Infrastructure Growth: up.time helps plan, consolidate, monitor, optimize, and automate the virtual infrastructure. Avoid sprawl and over provisioning, while enabling automated problem resolution.

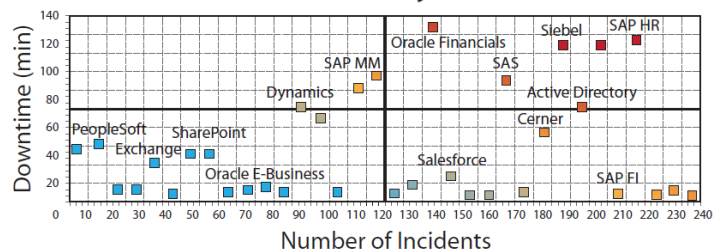

ROI: The Math Just Makes Sense with up.time:

- **You Spend:** 25 ESX servers + VMW licenses = \$300k
- **up.time Offers:** 35% Density/Efficiency Gain = \$105k savings.
- **up.time costs:** 25 ESX Server ~ \$20k

Net Result: \$20k of up.time drives \$105k in new savings with VMware. up.time is the logical add-on to make the most of your VMware investment.

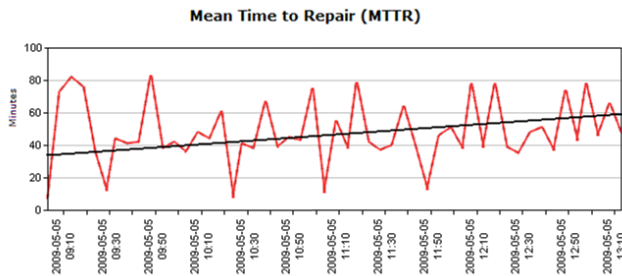

Incident Priority Quadrant

"Easy Identification of Trouble-making Infrastructure and Applications make Proactive IT Prioritization Real."

IT Management Results – Reduce Costs,

Increase Performance: In 90 days or less, realize up to 35% increase in efficiency. Drive true cost savings with a simplified licensing model. Speed time-to-value with a solution that is out-of-the box, deploys quickly with no services needed, and is both easy to use and maintain. Increase staff productivity and streamline the “tool soup” with a scalable enterprise systems management solution that helps you gain better control.

“Easily measure how M-T-T-R is trending over time”

Administration Results – More Visibility, Less

Problems: Faster Triage and MTTR, automated problem resolution of recurring incidents, optimized workloads, managed VM growth, and less clicks from dashboard to root-cause. Get a true understanding of your virtual environment.

Benefits with up.time

1. Quickly decrease Mean-Time-To-Repair (MTTR) without adding staff or expensive tooling
2. Automated incident avoidance helps move you from reactive toward proactive IT management
3. Enable Rapid VMware Growth
4. Identify sprawl and understand if it's trending better or worse over time
5. Decrease costs with one cost-effective solution

Download
up.time VM Appliance

Download the up.time Virtual Appliance Trial:

Deploy in seconds and see a complete perspective of your virtual environment right away.

Download
up.time

Download a 30-day Trial up.time: Pick platforms for up.time's monitoring station and agents/non-agents to monitor across your entire infrastructure.

Efficiency through Insight**Manage:** The Virtual Environment

- Incidence Response and Outage Avoidance
- VM Workloads and VM Density
- Across the Entire IT Infrastructure
- Consolidation
- Multiple Datacenters

Measure: With Clear and Actionable VMware Reporting

- VM Density Reporting
- Incident and MTTR Reports
- Consolidation (P-2-V) Reports
- Availability and Downtime Reports
- Performance Reports

Monitor: With Advanced VMware Metrics

- Performance and availability across virtual and physical infrastructure
- Application health
- Deep historical data on Instances, Applications, Servers
- Aggregate data upward into graphs and reports
- Intelligent alerting reduces alert storms

About uptime software

uptime software inc. is a privately held corporation founded in 2001 and headquartered in Toronto, Canada. uptime is a provider of systems management software that drives datacenter efficiency by maximizing performance and availability globally, enabling proactive IT management, and reducing IT costs for the SMB and Enterprise marketplaces.

Solutions Included with up.time:

- ✓ [Global Datacenter Visibility](#)
- ✓ [Server Monitoring Across Multiple Technologies](#)
- ✓ [VMware Monitoring and Management](#)
- ✓ [Server Consolidation and Virtualization](#)
- ✓ [Capacity Management and Reporting](#)
- ✓ [Outage Triage and MTTR Reduction](#)
- ✓ [Service Level Management](#)
- ✓ [Application Monitoring and Reporting](#)
- ✓ [Application Transaction Monitoring](#)

up.time is a certified VMware TAP Partner
